

Centrifugal Fan

Series
CA CQ

 EuroVent

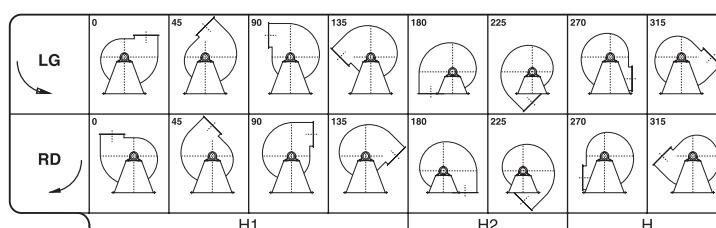

Fans series CA - CQ

Symbols and measurement units used in the catalogue.

| | |
|-----------------------|---|
| V m ³ /min | = Delivery in m ³ /min |
| V m ³ /h | = Delivery in m ³ /h |
| pt mmH ₂ O | = Total pressure in mm H ₂ O |
| pt Pa | = Total pressure in Pascal |
| pdmmH ₂ O | = Dynamic pressure in mm H ₂ O |
| pd Pa | = Dynamic pressure in Pascal |
| c ₂ | = Speed in m/s on pressing throat |
| n | = Fan rounds |
| L _p | = Noise level indicated in dB/A |
| P | = Power absorbed in kW |
| η | = Fan output |

Table of positions of discharge

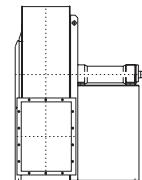

Fans constructive executions in conformity with rules UNI EN ISO 13349 (2009).

EXECUTION 1

For belt drive. Whee keyed overhung. Supports mounted on a base outside the air stream. Max air temperature 90 °C without cooling fan; 350 °C when fitted with cooling fan.

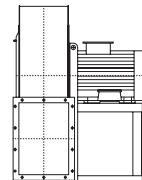

ESEC. 1

EXECUTION 4

For direc drive. Wheel keyed to motor shaft. Motor is supported by the base. Max air temperature 80 °C; when fitted with cooling fan 150 °C.

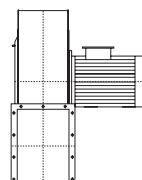

ESEC. 4

EXECUTION 5

For direct drive. Wheel keyed to motor shaft. Motor is supported by the case. Max air temperature 60 °C; when fitted with cooling fan 130 °C.

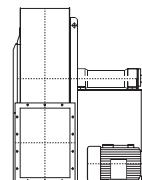

ESEC. 5

EXECUTION 9

For belt drive. Same as arrangement 1 with motor supported by the side wall of base. Max air temperature: 90 °C without cooling fan; 350 °C when fitted with cooling fan.

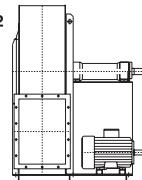

ESEC. 9

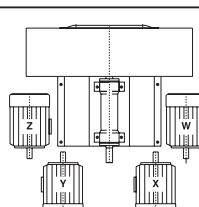

EXECUTION 12

For belt drive. Same as arrangement 1 with both fan and motor supported by the foundation frame. Max.air temperature: 90 °C without cooling fan; 350 °Cwhen fitted with cooling fan.

ESEC. 12

Plan for motor positioning belt drive.

General concepts about centrifugal fans

The centrifugal fan essentially in a scroll in which a wheel rotates. The wheel's movement is caused by an external energy source, that is usually an electric motor. The main characteristics of a centrifugal fan are:

- a) delivery
- b) pressure
- c) efficiency
- d) rotation speed

DELIVERY

It is indicated by the value of the fluid intaken through the fan in the time unit; normally this is stated by the ratio m³/sec., m³/min., or m³/h.

PRESSURE

It is usually indicated by the ratio kgf/m² or Pa. The pressure generated through a fan is named TOTAL (pt); it is the sum of two different pressures: STATIC + DYNAMIC. The static pressure (p.s.) is the potential energy that wins the circuit resistance when the fluid is passing through the circuit. The dynamic pressure (pd) is the kinetic energy of the moving fluid and it depends on the medium exit speed of the air from the fan throat; the formula is:

$$pd = \frac{C^2}{2g} \bullet 1.226 \quad C = \frac{V}{A}$$

where:

- V = delivery m³/sec.
- A = throat surface m²
- c = medium speed of the air m/sec.
- g = acceleration of gravity (9,81 m/sec)
- 1,226 = air specific gravity kg/m³ at 15°C and 760 mm Hg.

ENERGY

It consists in the ratio between the energy supplied by the fan to the fluid and the energy used by the external source to put in operation the fan.

The formula is:

$$\eta = \frac{V \bullet pt}{6120 \bullet P}$$

where:

- V = delivery m³/min.
- pt = total pressure kgf/m²
- P = used energy by the fan indicated in kW
- η = fan efficiency

ROTATION SPEED

It is indicated by the number of roundes per minute: at this speed the wheel must rotate in order to get the required performances.

N.B. The following tables show the characteristics of an operating device at air 15°C, barometric pressure 760 mm Hg, specific gravity 1,226 kg/m³, test according to UNI EN ISO 5801:2009 (UNI 10531:1995) rules. If customer wishes get different performances with intermediary value in respect of the value shown in the tables or if he prefers a device operating with air suction at different temperature in respect of 15°C and with different specific gravity in respect of 1,226 we suggest to follow these rules the characteristics of fans change according to the variation in speed rotation and considering the specific gravity of the fluid intaken.

a) Variation of rotation speed (n) with air specific gravity constant.

1. The delivery (V) varies directly with rotations ratio:

$$V_1 = V \bullet \frac{n^1}{n}$$

2. The pressure varies with square number of rotations ratio:

$$pt_1 = pt \bullet \left(\frac{n^1}{n} \right)^2$$

3. The energy (P) varies with cube of rotations ratio:

$$P_1 = P \bullet \left(\frac{n^1}{n} \right)^3$$

b) Variations of specific gravity (γ) of the air when rotation speed is constant.

1. The delivery (V) remains constant.

2. The pressure (pt) and the energy (P) vary directly with the ratio of specific gravities.

$$pt_1 = pt \bullet \frac{\gamma^1}{\gamma} \quad P_1 = P \bullet \frac{\gamma^1}{\gamma}$$

The specific gravity of the air at different temperatures is obtained through the formula:

$$\gamma = \frac{1,293 \bullet 273}{(273+t)} \text{ (kg/m}^3\text{)}$$

The air density depending on a change of the atmospheric pressure is given by the following formula:

$$\gamma = \frac{Pb \bullet 13.59}{29.27 \bullet (273+t)} \text{ (kg/m}^3\text{)}$$

where:

- γ = specific gravity at °C
- 1,293 = specific gravity of the air at 0°C
- t = air temperature indicated in °C
- 273 = absolute zero
- Pb = atmospheric pressure mm Hg

This table shows directly the air specific gravity at different temperatures:

| t°C | -20 | -10 | 0 | +10 | +15 | +20 | +30 | +40 | +50 | +60 | +70 | +80 | +90 | +100 | +120 | +140 | +160 | +180 | +200 | +220 | +240 | +260 | +280 | +300 | +325 | +350 |
|----------|-------|-------|-------|-------|-------|-------|-------|-------|-------|-------|-------|-------|-------|-------|------|------|------|------|------|------|------|------|------|------|------|------|
| γ | 1,396 | 1,342 | 1,293 | 1,248 | 1,226 | 1,205 | 1,165 | 1,128 | 1,093 | 1,060 | 1,029 | 1,000 | 0,973 | 0,947 | 0,90 | 0,85 | 0,82 | 0,78 | 0,75 | 0,72 | 0,69 | 0,66 | 0,64 | 0,62 | 0,59 | 0,56 |

Atmospheric pressure depending on altitude above sea-level:

| mt | 0 | 500 | 1000 | 1500 | 2000 | 2500 | 3000 | 3500 | 4000 | 4500 |
|----------|-----|-----|------|------|------|------|------|------|------|------|
| Pb mm Hg | 760 | 720 | 680 | 640 | 600 | 560 | 530 | 500 | 470 | 440 |

Fans series CA - CQ

CHARACTERISTICS

The features listed in the diagrams are referred to air at the temperature of + 15°C and at the barometrical pressure of 760 mm. Hg with specific gravity 1,226 Kg/m³.

NOISE LEVEL

The noise level values indicated are expressed in decibel scale A (dB/A) they are understood measured in a free range at the distance of **1.5 m** from the fan operating with the highest output capacity, connected to inlet and outlet pipe connections (rules UNI EN ISO 3740-3744-3746-13347).

ORIENTATIONS

All the fans can be constructed with the delivery mouth in 16 different positions (8 in clockwise rotation RD and 8 in counterclockwise rotation LG) as indicated on the orientation tables. Please note that the direction of rotation is determined by looking at the fan from the transmission side. Some sizes of these fans are revolvable always considering the rotation direction. This information is indicated at the end of the various tables of the overall dimensions. Flange see DIN 24154-24158.

ACCESSORIES (delivery on request)

- **intaking and pressing counterflange;**
- **inspection door:** to inspect and to clean the wheel and the scroll inside;
- **discharge cap:** it eliminates the condensate if any inside the fan and it is situated on the lowest part of the scroll.
- **vibrating proof joints in intaking and pressing time:** they are used to avoid the spreading of vibrations to the pipes;
- **safety grate for intaking throat:** it is used to avoid accidents when the fan is intaking from the room;
- **regulation lock on delivery:** it is used to regulate the fan delivery;
- **regulator of the flow rate in intaking time:** it is used to regulate the fan flow rate and it maintains high the efficiency level, also in regulating time.

SPECIAL CONSTRUCTIONS

Spark proof construction: when explosive fluids are carried or when the plant is installed in dangerous environments, the parts that come into contact with the intaken fluid are constructed by material without iron content to avoid rubbing, motor on request is supplied in special construction.

Corrosionproofing construction: when corrosive fluids are carried, the parts that come into contact with the fluid are painted with special paints or they are constructed with special materials as austentic stainless steels (AISI 304-316 etc.).Constructions can be effected according to the customer's particular needs.

SOME VALUES OF AIR SPEED THAT MUST BE OBSERVED INSIDE THE IRON PIPES FOR SUCTION PLANTS, RELATING TO FOLLOWING MATERIALS:

| | |
|--------------------------------------|-----------|
| Cereals dust | 16–19 m/s |
| Varnish dust | 15–18 m/s |
| Wooden shaving and sawdust | 18–24 m/s |
| Dry dust of chemicals | 17–20 m/s |
| Coal dust | 20–25 m/s |
| Dust of plastic material working | 18–23 m/s |
| Foundry fumes | 15–18 m/s |
| Lapping sharpening and bufing wheels | 20–25 m/s |
| Fumes of solvents for degreasing | 12–17 m/s |
| Metallic shaving and dust | 25–38 m/s |
| Rubber dust | 17–20 m/s |
| Any toxic dust | 15–25 m/s |
| Zinc oxide dust | 18–21 m/s |
| Saw dust of marble | 20–25 m/s |
| Hides buffing | 18–23 m/s |

SOME DATA ABOUT THE NUMBER OF THE AIR CHANGINGS FORESEEN IN CIVIL, INDUSTRIAL AND AGRICULTURAL ENVIRONMENTS:

| Enviroments No. changings/hour | | | | | |
|--------------------------------------|----|------------------------------------|----|-----------------------|----|
| Hen - hutch | 8 | Hide drying processes | 35 | Shops | 5 |
| Bovine - swine breeding | 10 | Factories for rubber production | 12 | Hospitals | 6 |
| Hotel halls -rooms - corridors | 4 | Factories for alimentary pastes | 6 | Gymnasiuums | 20 |
| Garages | 8 | Factories for chemicals production | 15 | Baker shops | 15 |
| Banks | 6 | Joinerries | 6 | Swimming-pools | 25 |
| Bathrooms - showerbaths | 6 | Spinning - and weaving mills | 5 | Dance-halls | 20 |
| Galvanic baths | 25 | Foundries | 25 | Card-rooms | 10 |
| Carpenter shops - welding shops | 12 | Forge shops | 25 | Waiting-rooms | 10 |
| Heating plants | 60 | Steam laundries | 30 | Schools | 6 |
| Churches | 15 | Rooms for electric furnaces | 30 | Metallurgical works | 5 |
| Coffee - houses - bars - restaurants | 10 | Rooms for furnace | 20 | Supermarkets | 5 |
| Cinemas - theatres | 15 | Warehouses for perishable goods | 15 | Dyeing plants | 30 |
| Dye works | 15 | Warehouses for unperishable goods | 5 | Printing shops | 20 |
| Tanneries | 18 | Tobacco manufactures | 12 | Toilettes | 30 |
| | | Grinding mills | 20 | Technical departments | 15 |

series CA-CQ SPECIFICATIONS

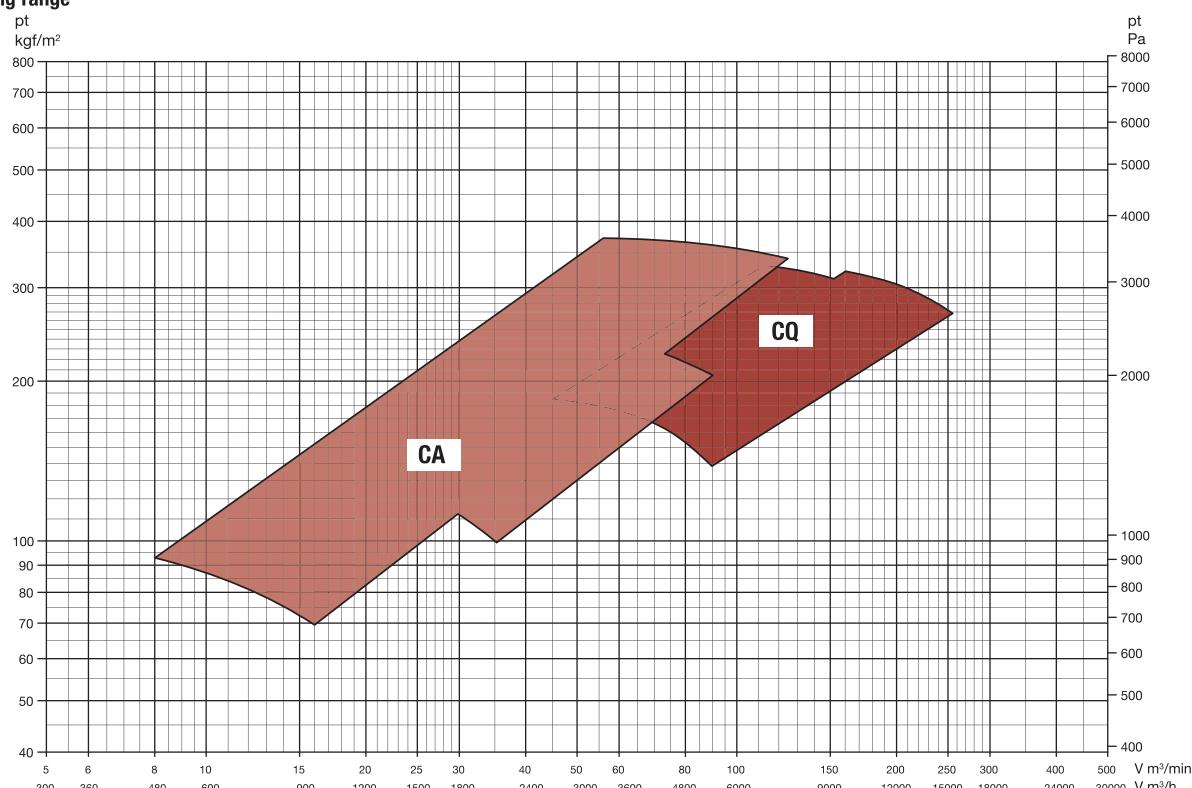

USE:

For the suction of very dusty air containing various types of materials in suspension.

These types of fans are mainly used in the following industries:

- joinery works (for the transport of saw dust and wooden shavings).
 - tanneries (for the transport of trimmings and skin shavings).
 - industries for plastic articles (for the transport of granulates).
- The temperature of the fluid sucked in must not exceed 80°C.

External **flow regulator** designed for dusty air, sturdy construction, for industrial use.

Layout 1 = max. temperature 120°C.

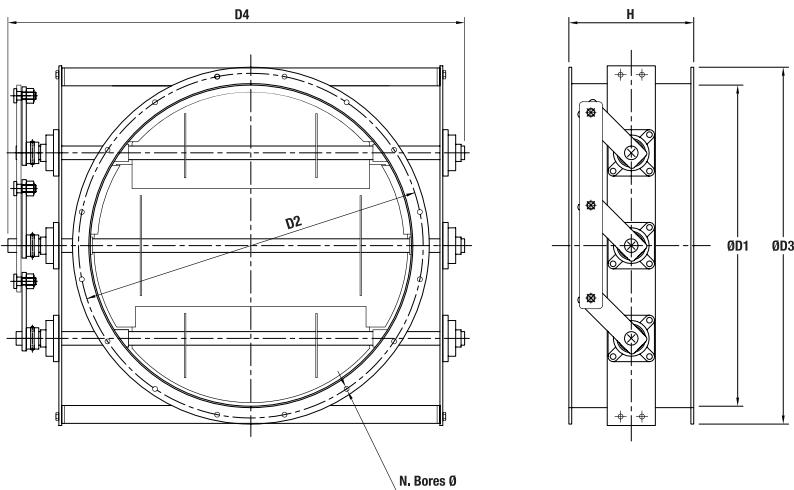

Layout 2 = from 120 to 350°C. + pressure ≥ 700 mm H₂O.
