

2.1.6.1.3 DELTA Servo drive and Motor , Series ASDA-M

The ASDA-M series goes beyond the typical servo drive. It includes 3-axis servo drives in one frame to support real-time data exchange among three axes without any time delay and provides 3-axis synchronous motion control with performance better than comparable servo drives. Users can perform 3-axis linear/arc/helical interpolation functions easily. The ASDA-M series also features a new gantry control function for synchronous control that is precisely adapted to pure rigid mechanical systems. The ASDA-M series is your best choice for the highly integrated systems and the high-end machines requiring 3-axis synchronous control.

Features & Benefits

- Multi-axis synchronous interpolation
- Advanced gantry control
- Flexible electronic cam (E-Cam) function
- Excellent vibration and resonance suppression for different mechanical applications
- Full-closed loop control (Accuracy of positioning guaranteed)
- Versatile PR mode for various and multiple continuous motion movements

ประเภทสินค้า : Servo drive and Motor

Series : ASDA-M

Application

**High-end machines requiring 3-axis synchronous control / Adhesive dispensing /
Gluing machines/ Winding machines / Multi-axis Cartesian robot arms / Gantry
control system**
